

Stats1 Chapter 1 :: Data Collection

jfrost@tiffin.kingston.sch.uk

www.dr frostmaths.com

[@DrFrostMaths](https://twitter.com/DrFrostMaths)

The chapters of Stats Year 1 could be broadly organised as follows:

This Chapter Overview

Interestingly, most of this chapter is from the old S3 module (a Further Maths module!) with also some S2. There is little 'calculation' involved in this chapter; consider this a 'bookwork' one!

1:: Populations vs samples

"Suggest why we would not test all the light bulbs."
"Identify the sampling frame."

3:: Non-Random Sampling

Describe how a stratified sample would be conducted, including strata sizes.

2:: Random Sampling

Describe the disadvantages of systematic sampling.

4:: Types of data

Continuous vs discrete, terms such as class intervals, class boundaries, class width.

5:: Edexcel's 'Large Data Set'

What you're expected to know about the 'large data set' of weather data, and how to use it.

Populations and samples

Population

A population is:

?

A sample is:

?

You're probably used to a 'population' meaning all humans/animals within a country/ecosystem. But a population could be "*all the lightbulbs in a factory*" or "*all the cars in the UK*".

Sampling key terms

✎ Each individual thing in the population that can be sampled is known as a **sampling unit**.

✎ Often sampling units of a population are individually named or numbered **to form a list** called the **sampling frame**.

Populations vs Samples

We could collect data either from a sample, or from the entire population.

Data collected from the entire population is known as a

	Advantages	Disadvantages
Census	<input data-bbox="255 401 768 594" type="text" value="?"/>	<input data-bbox="774 401 1877 594" type="text" value="?"/>
Sample	<input data-bbox="255 598 768 791" type="text" value="?"/>	<input data-bbox="774 598 1877 791" type="text" value="?"/>

Example: A supermarket wants to test a delivery of avocados for ripeness by cutting them in half.

- Suggest a reason why the supermarket should not test all the avocados in the delivery.
- The supermarket tests a sample of 5 avocados and finds that 4 of them are ripe. They estimate that 80% of the avocados in the deliver are ripe. Suggest one way that the supermarket could improve their estimate.

a

b

Exercise 1A

Pearson Statistics & Mechanics Year 1/AS

Page 3

Types of Sampling

I recommend laying out your notes like this for next bit of the chapter. Use a full page.

	Type	How to carry out	Advantages	Disadvantages
Random Sampling	Simple Random Sampling			
	Systematic Sampling			
	Stratified Sampling			
Non-Random	Quota Sampling			
	Opportunity Sampling			

Random Sampling

Ordinarily, we would want each thing in our sampling frame to have an equal chance of being chosen, in order to avoid bias.

This is known as random sampling.
There are a few ways of doing this...

Simple Random Sampling

Type	How to carry out	Advantages	Disadvantages
Simple Random Sampling	What is it :		
	?		
	Method:	?	?
	?		

Edexcel S3 June 2004 Q1a

There are 64 girls and 56 boys in a school. Explain briefly how you could take a random sample of 15 pupils using a simple random sample. **(3)**

?

Systematic Sampling

Type	How to carry out	Advantages	Disadvantages
Systematic Sampling	What is it : ?	?	?

Edexcel S3 June 2009 Q1a

A telephone directory contains 50 000 names. A researcher wishes to select a systematic sample of 100 names from the directory. Explain in detail how the researcher should obtain such a sample. **(2)**

?

Stratified Sampling

We want to sample 20% of the population. If the population were divided into distinct groups (e.g. age ranges), known as 'strata', we could randomly sample 20% from each group, ensuring each group is equally represented.

Population

Type	How to carry out	Advantages	Disadvantages
Stratified Sampling	What is it : ?	?	?

Example Question

Edexcel S3 Jan 2006 Q1

A school has 15 classes and a sixth form. In each class there are 30 students. In the sixth form there are 150 students. There are equal numbers of boys and girls in each class. There are equal numbers of boys and girls in the sixth form. The head teacher wishes to obtain the opinions of the students about school uniforms. Explain how the head teacher would take a stratified sample of size 40. **(7)**

?

You would certainly want to know your mark scheme on this one!

Exercise 1B

Pearson Statistics & Mechanics Year 1/AS

Pages 6-7

Non-Random Sampling

Consider the following scenario: You wish to conduct a survey in the UK **on whether being left-handed affects IQ**. We need to choose people to assess.

Why would random sampling be problematic?

?

Famous Lefties

OK,
maybe
not so
famous.

For this scenario we'd likely use **quota sampling**, i.e.

1. As with stratified sampling, divide population into groups according to characteristic of interest, then determine size of each group in sample to reflect proportions within the population.
2. But instead of random sampling within each group, we actively choose people within each group via suitable means (e.g. advertising), **until the 'quota' for each group is filled.**

A variant of this is **opportunity sampling**, where we find people **at the same time the survey is being carried out** (e.g. exit polls at polling stations). This is not a suitable method for the left-handed example, because giving the likely time-consuming nature of assessment coupled with resources required, we'd likely arrange with the people taking part before the actual assessment tasks took place.

Quota & Opportunity Sampling

Type	How to carry out	Advantages	Disadvantages
Quota Sampling	?	?	?
Opportunity/ Convenience Sampling	?	?	?

Example Question

Edexcel S3 June 2010 Q2

A lake contains 3 species of fish. There are estimated to be 1400 trout, 600 bass and 450 pike in the lake. A survey of the health of the fish in the lake is carried out and a sample of 30 fish is chosen.

- (a) Give a reason why stratified random sampling cannot be used. (1)
- (b) State an appropriate sampling method for the survey. (1)
- (c) Give one advantage and one disadvantage of this sampling method. (2)
- (d) Explain how this sampling method could be used to select the sample of 30 fish. You must show your working. (4)

(a) ?

(b) ?

(c) ?

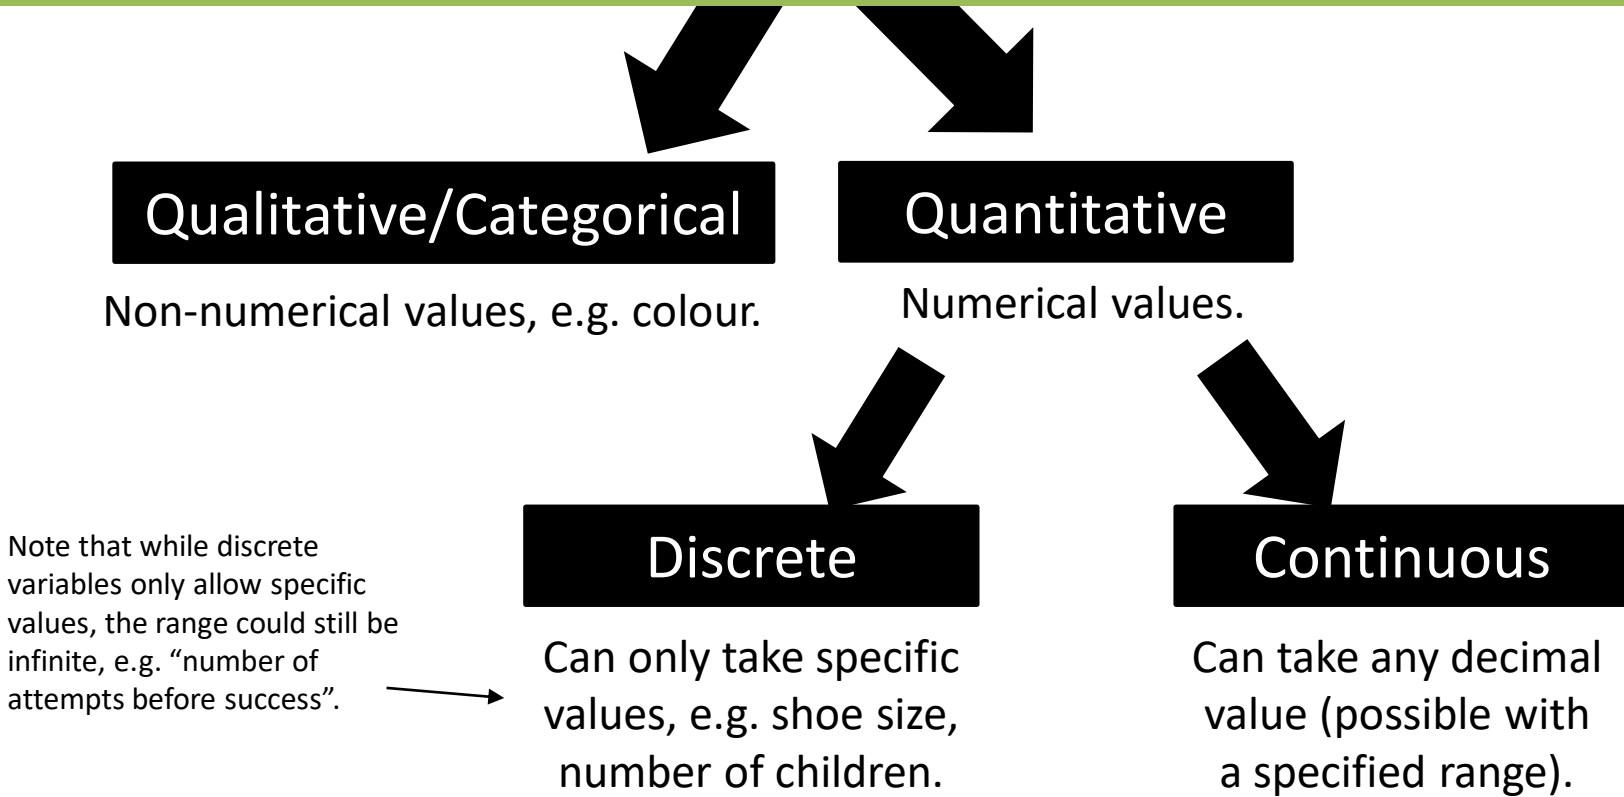

(d) ?

Exercise 1C

Pearson Statistics & Mechanics Year 1/AS

Pages 8-9

Types of Data

Data can be **grouped** for conciseness, at the expense of losing the exact original values.

Weight w (kg)	Frequency
$0 \leq w < 20$	3
$20 \leq w < 70$	4

Exercise 1D

Pearson Statistics & Mechanics Year 1/AS

Page 10

(This exercise could probably be skipped)

Name That Sampling Method!

Simple Random Sampling	Systematic Sampling	Stratified Sampling	Quota Sampling	Opportunity Sampling
------------------------	---------------------	---------------------	----------------	----------------------

Suggest a suitable sampling method.

“You wish to test lightbulbs produced by a factory in a daily batch.”

?

“You wish to survey consumer opinion on your new drink *FizzGuzz* released in the UK.”

?

“You wish to determine students’ favourite TV programmes in your school, that is fairly representative of each year group.”

?

Large Data Set

All A Level exam boards are obligated to provide a 'large data set'. Data in exam questions will often be from this set, and you are encouraged to explore this data (which is publicly available) in Microsoft Excel.

It is important to note that you are expected to be familiar with this data set before you go into your exam, including some basic geographic knowledge!

The screenshot shows an Excel spreadsheet with the Pearson logo in cell A1. The text in the spreadsheet is as follows:

1 Introduction
Pearson have provided this large data set, which will support the assessment of Statistics in the A Level Mathematics Paper 3 and AS Mathematics Paper 2. Students are required to become familiar with the data set in advance of the final assessment.

To support the use of the large data set in the teaching of the statistics content, tasks such as:

- selecting a sample
- cleaning the data
- creating diagrams from the data
- calculating summary statistics such as mean, standard deviation
- calculating regression equations and correlation coefficients where applicable
- hypothesis testing.

must be carried out by students during their course of study. Students should use technology such as spreadsheets or other statistical packages to explore the data.

See the specifications A Level Mathematics (SMAS) and AS Mathematics (SMAS) for further information

7 Data set source

The data set consists of weather data samples provided by the Met Office for five UK weather stations and three overseas weather stations in the time periods May to October 1967 and May to October 2015. The weather stations are labelled on the maps shown:

- in the UK - Camborne, Heathrow, Hum, Leeming and Leuchars
- overseas - Beijing, Jacksonville and Perth

Further information around our data source can be accessed at <http://www.metoffice.gov.uk>

10 Dataset variables and explanatory notes

The Met Office provides data for a number of different weather variables. Our data set includes data for eleven variables recorded across the weather stations during the set periods of time:

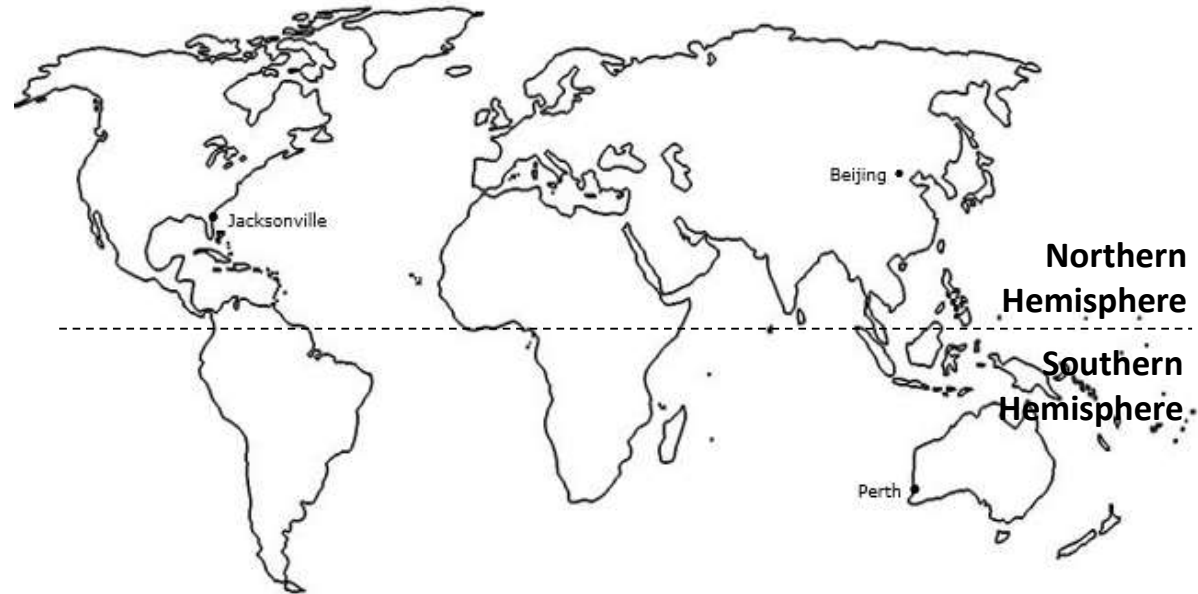

Daily Mean Temperature
All temperatures are recorded by thermometers in a lowered screen 1.25 metres above short grass, except at some Weather Centre's and Climate Data Logger stations, where observations are made from a non-standard location.

The spreadsheet also contains two maps: a map of the United Kingdom with weather stations marked (Leuchars, Leeming, Heathrow, Hum, Camborne) and a world map with weather stations marked (Beijing, Jacksonville, Perth). At the bottom, there is a navigation bar with tabs for 'Information', 'Camborne May-Oct 1967', 'Heathrow May-Oct 1967', 'Hum May-Oct 1967', 'Leeming May-Oct 1967', 'Leuchars May-Oct 1967', and 'Camborne M'.

Edexcel's data set concerns **weather data from a number of weather stations**. Let's explore what you might be expected to know...

[https://qualifications.pearson.com/content/dam/pdf/A%20Level/Mathematics/2017/specification-and-sample-assesment/Pearson%20Edexcel%20GCE%20AS%20and%20AL%20Mathematics%20data%20set%20-%20Issue%201%20\(1\).xls](https://qualifications.pearson.com/content/dam/pdf/A%20Level/Mathematics/2017/specification-and-sample-assesment/Pearson%20Edexcel%20GCE%20AS%20and%20AL%20Mathematics%20data%20set%20-%20Issue%201%20(1).xls)

What You Need To Be Familiar With...

1

You should know the names and rough locations of the 5 UK weather stations, as well as the 3 international weather stations.

The data was recorded for:

- May-Oct 1987
- May-Oct 2015

All the following are daily...

2 You should be familiar with the variables involved and their respective units.

Total rainfall
(in mm)
tr/trace means less than 0.05mm

Mean Windspeed
kn/knot is "nautical mile per hour". 1kn = 1.15 mph
Windspeed also given on **Beaufort Scale:**

0 = Calm	< 1kn
1-3 = Light	1-10kn
4 = Moderate	11-16kn
5 = Fresh	17-21kn

Mean Visibility
How far (in metres) can be seen into the horizon during daylight hours.

Wind Direction

Date	Daily Mean Temperature (0900-0900) (°C)	Daily Total Rainfall (0900-0900) (mm)	Daily Total Sunshine (0000-2400) (hrs)	Daily Mean Windspeed (0000-2400) (kn)	Daily Mean Windspeed (0000-2400) (Beaufort conversion)	Daily Maximum Gust (0000-2400) (kn)	Daily Maximum Relative Humidity %	Daily Mean Total Cloud (oktas)	Daily Mean Visibility (Dm)	Daily Mean Pressure (hPa)	Daily Mean Wind Direction (o)	Cardinal Direction	Daily Max Gust Corresponding Direction (o)	Cardinal Direction

16/05/1987	10.2	tr	11.6	6	Light	18	92	4	3700	1015	290	WNW	290	WNW

Mean temperature
(in °C)
Textbook claims this is max temp for UK, but it is mean temp for all locations.

Total sunshine
(nearest 1/10 of an hour)

Maximum Gust
(in kn) is highest instantaneous wind speed.

Humidity
is the % of air saturation with water vapour. 100% is the maximum % water content air can contain.

Mean Cloud Cover
Oktas means the number of 1/8ths of the sky covered.

Mean Pressure
In hectopascals (hPa)

3

You should have a vague idea of the range of values for each location.

UK Location (2015)	Temp Range	Wind Speed Range
Camborne	10-20	3-18
Heathrow	8-29	3-19
Hurn	6-24	2-19
Leeming	4-23	3-17
Leuchars	4-19	3-23

World Location (2015)	Temp Range	Wind Speed Range
Beijing	8-33	2-9
Jacksonville	15-31	1-12
Perth	8-25	4-14

Beijing temp range relatively large.
Min Jacksonville temp high.
Perth similar to UK.

Mean wind speed in UK across full period was roughly 9 nm. But 4 nm in Beijing (i.e. lower), 5 in Jacksonville (again lower), 8 in Perth (similar to UK).

From new A Level sample assessment materials:

“A meteorologist believes that there is a relationship between the daily mean windspeed, w kn, and the daily mean temperature, t °C. A random sample of 9 consecutive days is taken from past records from a town in the UK in July and the relevant data is given in the table below. ...

Using the same 9 days, a location from the large data set gave $\bar{t} = 27.2$ and $\bar{w} = 3.5$.

(d) Using your knowledge of the large data set, suggest, giving your reason, the location that gave rise to these statistics.”

(Note to teachers: I will not otherwise use SAM questions in these slides. I made one exception here!)

4

You should have a vague idea of the range of values for each variable for the data set as a whole.

Variable	Typical value(s)
Gust (UK only)	8 – 52 nm
Rainfall	0 – 60 mm in UK, but more extreme maximums elsewhere (e.g. 102mm in Perth)
Pressure	988 – 1038 hPa
Wind Speed on Beaufort scale	Max is 'fresh' (5). Most Light or Moderate.
Sunshine (UK only)	0 – 16 hrs
Cloud Cover	0 – 8 ocktas (i.e. full spread)

Example Questions

Hurn

© Crown Copyright Met Office 1987

Date	Daily Max Temp (09-00-0900 C)	Daily Total Rainfall (0900-0900) (mm)	Daily Total Sunshine (0000-2400) (hrs)	Daily Mean Windspeed (0000-2400) (kn)	Daily Mean Windspeed (0000-2400) (Beaufort conversion)	Daily Maximum Gust (0000-2400) (kn)
01/06/1987	15.1	0.6	4.5	7	Light	19
02/06/1987	12.5	4.7	0	7	Light	22
03/06/1987	13.8	tr	5.6	11	Moderate	25
04/06/1987	15.5	5.3	7.8	7	Light	17
05/06/1987	13.1	19	0.5	10	Light	33
06/06/1987	13.8	0	8.9	19	Fresh	46
07/06/1987	13.2	tr	3.8	11	Moderate	27
08/06/1987	12.9	1	1.7	9	Light	19
09/06/1987	11.2	tr	5.4	6	Light	19
10/06/1987	9.2	1.3	9.7	4	Light	n/a
11/06/1987	12.6	0	12.5	6	Light	18
12/06/1987	10.4	0	11.9	5	Light	n/a
13/06/1987	9.6	0	8.6	5	Light	15
14/06/1987	10.2	0	13.1	5	Light	18
15/06/1987	9.2	3.7	7.1	4	Light	25
16/06/1987	10.4	5.6	8.3	6	Light	25
17/06/1987	12.8	0.1	5.3	10	Light	27
18/06/1987	13.0	7.4	3.2	9	Light	24
19/06/1987	14.0	tr	0.4	12	Moderate	33
20/06/1987	12.6	0	7.7	6	Light	17

As previously noted, the **actual** data set has mean temperature for all locations. I changed to maximum temperature for this example for consistency with the textbook.

[Textbook]

(a) Describe the type of data represented by daily total rainfall.

Alison is investigating daily maximum gust. She wants to select a sample of size 5 from the first 20 days in Hurn in June 1987. She uses the first two digits of the date as a sampling frame and generates five random numbers between 1 and 20.

b) State the type of sample selected by Alison.

c) Explain why Alison's process might not generate a sample of size 5.

a	?
b	?
c	?

Example Questions
