

Geographers Explore Green Careers

MVV Environment Ltd, in collaboration with a wide range of companies and organisations, ran a Sustainable Futures CEIAG Careers Fair event at Queen Mary Centre, Wisbech, on 15th October 2025 and our Year 10 Geographers were in attendance.

The event aimed to expand awareness and understanding of careers in construction, engineering and associated roles - particularly where relevant to new technologies, greenskills, sustainability and the environment.

MVV Environment Ltd plans to develop a new 'energy from waste' facility to generate electricity and will be looking to employ local people to help build, operate and maintain the facility.

The facility will divert over half a million tonnes of non-recyclable waste from landfill every year, generating over 50 megawatts of electricity and offering the opportunity supply steam to local factories. As such, it was a great case study for our Geographers to learn about as there are clear links to the GCSE Geography curriculum.

As a next step, Geography teachers across the West Norfolk Academies Trust are looking to develop a partnership with MVV so students can get further insights into sustainable energy generation in the future.
